

*Comp160*  
*Lab 3*  
*Spring 2018*

In this lab you'll be working out some basic function definitions.

*Lab 2*

All of your problems for this week come from the text book. Use comments in your code to label each problem with an exercise number. For each function you should provide a brief description of the function's purpose as well as several concrete examples. Write the statement of purpose as a comment above the definition and the examples as comments below the definition as seen in the pseudo-example given below:

---

```
1
2 ; Exercise 192
3
4 ; This function computes ... given ...
5 (define (foo x y z)
6   ...)
7
8 ; (foo 1 2 3) --> 14
9 ; (foo 4 5 6) --> 21
```

---

*Do the following problems from section 2.1 of the text: 11, 12, 13, 15, 16, 17, 19, and 20.*
